

## Purpose

This document primarily aims to organize our functions in a small and easy to use database. The files in this document are located in the /src folder where most of our code is. Updating this document after a push is highly recommended, but not necessary. I updated, make sure to update the header.

---

## Key

Struct

Enum

Function

Global Var

U - Uncommented/Needs better Documentation

H - Hard to Understand

F - Needs Formatting

D - Duplicate Function

---

## compiler.c

2 Functions

	void compile()
	void assembler()

---

## eval-apply.c

5 Functions

U	int self_evaluatingp(object *exp)
U	int primitivep(object *exp)
U	object *apply_primitive_procedure(object *procedure, object *arguments)
	char *apply(char operator, int arguments[])
	char *eval(eval_arguments exp_env)

---

## hash.c

2 Structs, 5 Functions

	typedef struct entry_s
--	------------------------

	<code>typedef struct hashtable_s</code>
	<code>hashtable_t *ht_create(int size)</code>
	<code>int ht_hash(hashtable_t *hashtable, char *key)</code>
	<code>entry_t *ht_newpair(char *key, char *value)</code>
	<code>void ht_set(hashtable_t *hashtable, char *key, char *value)</code>
	<code>char *ht_get(hashtable_t *hashtable, char *key)</code>

lexer.c

3 Structs, 1 Enum, 2 Global Vars, 19 Functions

	<code>struct token_object</code>
	<code>struct identifier</code>
	<code>typedef struct token_list</code>
	<code>char* chopN(char *charBuffer, int n)</code>
	<code>token_list* reverse_tokenlist(token_list *head)</code>
	<code>token_list* cons1(struct token_object val, struct token_list *cdr)</code>
	<code>enum Token</code>
	<code>static char* identifier_string</code>
	<code>static double number_value</code>
	<code>int count_token_list(token_list *curcor)</code>
	<code>char* first(struct token_list *list)</code>
	<code>char* find_value(struct token_list *list)</code>
	<code>char* find_type(struct token_list *list)</code>
	<code>token_list* rest(struct token_list *list)</code>
	<code>char* scat(char *s, char *t)</code>
	<code>char* print_token_list(struct token_list *list, char *result)</code>
	<code>char* print_token_list_debug(struct token_list *list, char *result)</code>

	int iswhitespace(char c)
	char* append(char *s, char c)
	struct identifier* read_identifier(char *program, int index)
	struct identifier* read_number(char *program, int index)
	char* token_type(char *token)
	int count_chars(char *string, char ch)
	token_list* list_lexer(char *program)
	token_list* list_lexer_tmp(char *program)

parser.c

1 Enum, 4 Structs, 10 Functions

	enum type
	typedef struct constructor_cell
	struct symbol
	typedef struct object
	object* cons3(object *car, object *cdr)
	object* car1(object *cell)
	object* cdr1(object *cell)
	object* create_number(int number)
	object* create_variable(char* variable)
	object* create_primitiveop(char* variable)
	typedef struct type_list
	char* get_car(void *car)
	constructor_cell* construct_cell(void *first_element, void *list)
	void print_token_list2(token_list *token_list)
	constructor_cell* parse(token_list *token_list, constructor_cell *code_tree)

print.c

1 Function

	char* print1(object *result)
--	------------------------------

read.c

7 Structs, 2 Global Vars, 17 Functions

U	struct token
	struct object
	typedef struct token_list
	static char *identifier_string
	static double number_value
	typedef struct pair
	typedef struct pair1
	typedef struct eval_arguements1
	typedef struct eval_arguements
	token_list* create_token(struct token token, token_list *next)
	token_list* prepend(struct token token, token_list *head)
	pair* create1(void *car, void *cdr)
	char* car(struct pair1 *list)
	pair1 cdr(struct pair1 *list)
	void print(struct pair1 *list)
	pair* cons(void *car, pair* cdr)
	pair1* cons1(struct object val, struct pair1 *cdr)
	int isnumber(char *s)
	int count_tokenList(token_list *head)

	int count_nodes1(pair1 *head)
	int count_nodes(pair *head)
	token_list* reverse_tokenlist(token_list *head)
	pair1* reverse_code_tree(pair1 *head)
	struct eval_arguments1 parser(struct pair1* token_list)
	pair1* remove_front(pair1* head)
	pair1* read_from_tokens(struct pair1 *token_list)

read2.c

5 Global Vars, 1 Struct, 4 Functions

	int left
	int right
	int invalid
	int value
	char charSet[]
	struct Token
	int isnumber(char s)
	int isoperator(char s)
	int isbrackets(char s)
	char* read_token(char *program)

read\_o.c

1 Enum, 2 Global Vars, 2 Structs, 7 Functions

	enum Token
	static char *identifier_string
	static double number_value

	<code>typedef struct pair</code>
	<code>typedef struct eval_arguements</code>
	<code>pair* create1(void *car, void *cdr)</code>
	<code>pair* cons(void *car, pair *cdr)</code>
	<code>int isnumber(char *s)</code>
	<code>struct eval_arguements read(char *program)</code>
	<code>char* read_token(char *program)</code>
	<code>int read_list(pair *list_so_far)</code>
	<code>char* micro_read(char *program)</code>

repl.c

1 Struct, 2 Global Vars, 12 Functions, Main

	<code>typedef struct pair</code>
	<code>const char *type_array[1]</code>
	<code>int command</code>
	<code>pair* create1(void *car, enum type type, void *cdr)</code>
	<code>pair* cons(void *car, enum type type, pair *cdr)</code>
	<code>int read_list(pair *list_so_far)</code>
	<code>int isnumber(char *s)</code>
	<code>pair *read(char *program)</code>
	<code>int count(pair *cursor)</code>
	<code>char* car(struct pair *list)</code>
	<code>pair* cdr(struct pair *list)</code>
	<code>void printInt(void *n)</code>
	<code>void printChar(void *n)</code>

	void print(pair *list)
	pair* lookup_variable_value(pair *exp, pair *env)
	int main(char *argc, char **argv[])

---

vm.c

3 Global Vars, 6 Functions

	int MAXSIZE
	int stack[8];
	int top
	int isEmpty()
	int isFull()
	int peek()
	int pop()
	int push(int data)
	void machine(int code[])
